

Portfolio

Portfolio — *a collection of mini-projects*

A showcase of serverless web applications and technical demonstrations hosted on Vercel, built with a modern React and Node.js stack. Demonstrating full-stack development, from interactive frontends to robust backend APIs and data pipelines. Available at <https://favilibero.com/>.

- **Trading Agent** – An autonomous trading research system that monitors markets, enriches financial news through multiple AI layers, and outputs a justified BUY/SKIP decision in under 3 minutes — all on zero-cost infrastructure. An N8N workflow orchestrates the full pipeline using backend API routes: a fast model parses and scores news at high throughput, then escalates to a more capable model that fuses technical signals, live market data, and enriched news into a single reasoning chain. Every trade is logged, feeding a self-improvement loop that makes the system smarter over time. Built with FastAPI, Next.js, Supabase, N8N, and OpenRouter. Available at <https://trader-module-frontend.vercel.app/>.
- **Custom Website AI Assistant** – Conversational AI assistant built on the Anthropic Claude API with a two-tier model strategy and a custom code-inspection tool for accurate technical explanations. Available throughout the website.
- **Dashboard** – Real-time Austin traffic incident dashboard with a daily ETL pipeline (SoQL API → Neon Postgres). Built with React, Next.js, and Material-UI. Available at <https://favilibero.com/projects/dashboard>.

Experience

Italian Furniture, Ukraine — *Regional Sales Manager*

MARCH 2017 - FEBRUARY 2022

Built a custom lead-scoring system in Excel that aggregated and standardized nationwide sales data, enabling data-driven partner prioritization and smarter resource allocation across the region. Acted as the operational bridge between Italian manufacturers and Ukrainian distribution partners, managing B2B relationships end to end — including representing partners in direct client negotiations. Adapted the sales strategy through a major market disruption by identifying shifting demand patterns in the data and reallocating focus to sustain performance.

Marketing Startup, Ukraine — *Co-founder*

JULY 2020 - FEBRUARY 2022

Built and managed data-driven Meta Ads campaigns for private and political clients, using A/B

testing and platform analytics (CTR, ROAS, conversion rates) to iteratively optimize ad creatives designed in Figma. Developed automated 3-month content calendars and scheduling pipelines so clients had a repeatable, hands-off advertising system. Improved conversion rates and audience reach through systematic creative iteration and strategic targeting.

Skills

- **Software Development** - Python, Javascript, Typescript, C++.
- **AI Automation** - N8N workflow orchestration, Claude SDK, multi-model AI pipelining.
- **FrontEnd Development** - React, Next.js, Material-UI.
- **Data Processing** - Pandas, BigQuery, R, Excel, REST API, AI Data Enrichment.

Education

Austin Community College, US — *Associate in Computer Science*

JANUARY 2024 - DECEMBER 2025

Strong academic standing throughout. 3.8 GPA.

Kyiv University of Culture, Ukraine — *Bachelor of Journalism, audio/visual and radio art.*

SEPTEMBER 2017 - JULY 2020

Specialization in audio/visual and radio art. Foundation in media communications, public writing, and strategic messaging.

Awards & Certifications

Google Google Data Analytics Professional Certificate. April 2023. Coursera. Successfully completed the 6-month course gaining proficiency and experience with SQL, R and Pandas for data analytics.

Google Google Business Intelligence Professional Certificate. June 2023. Coursera. Completed a follow-up course to bolster my skills in data analysis.

NOI Hackathon victory. December 2023. Won a hackathon by creating an app for logistics business to increase workers engagement.

ACC honours program. January 2025. Joined ACC honours program via extensive support from the faculty and excellent academic standing. Completed honours Statistic and Calculus classes.

Austin AI Alliance. August 2025. Received an award as a participant and was a data-team lead for the event organizers. Was responsible for collecting data from the event and performing sentiment analysis.

Meta React Specialization (Meta). January 2026. Coursera. Completed a 2-month course on React to improve the fundamental knowledge of the framework. Improving the quality of data visualization and general JS skills.

Languages

Native: English, Italian, Ukrainian, Russian.

Elementary: Chinese, French, German.
