Portfolio

Portfolio — *a collection of mini-projects*

A showcase of serverless web applications and technical demonstrations hosted on Vercel, built with a modern React and Node.js stack. Demonstrating full-stack development, from interactive frontends to robust backend APIs and data pipelines. Available at <https://fenix473.vercel.app>.

- **Piano** – An interactive 49-key digital piano, built with React and the Web Audio API. The application integrates an N8N workflow via webhook that interfaces with a large language model to generate original melodies based on user prompts, returning structured JSON containing note sequences, tempo, and duration data. Generated melodies are persisted in a Neon database through Next.js API Routes, enabling users to save, list, and replay their AI-created compositions. Available at <https://fenix473.vercel.app/projects/piano>.
- **Custom Website AI Assistant** – A conversational AI assistant integrated throughout the portfolio website, powered by the Anthropic Claude API with a two-tier model strategy for cost efficiency and capability. The assistant features a custom `inspect_project_code` tool that references a detailed code map, allowing it to retrieve file paths and generate GitHub URLs to provide accurate technical explanations about the website's implementations. Offering both an embedded floating chat window and a full-screen mode, with three selectable personas. Available throughout the website.
- **Dashboard** – An interactive dashboard that visualizes real-time traffic incident data from the City of Austin's public safety dataset using Leaflet and OpenStreetMap. The application implements a daily ETL pipeline using Cron Jobs to get incident data from the Austin Open Data Portal via their SoQL API, process it server-side, and store it in a Neon serverless Postgres database. Built with React, Next.js, and Material-UI, the frontend features a modular component architecture with map visualization, data tables, statistics displays, and form inputs for incident management. Available at <https://fenix473.vercel.app/projects/dashboard>.

Skills

- **Software Development** - Python, Javascript, Typescript, C++.
- **AI Automation** - N8N, Anthropic Claude SDK.
- **FrontEnd Development** - React, Next.js, Material-UI.
- **Data Processing** - Pandas, BigQuery, R, Excel, REST API.

Experience

Marketing Startup, Ukraine — Co-founder

JULY 2020 - FEBRUARY 2022

Managed Meta Ads campaigns for private companies and political clients, creating and optimizing ad creatives in Figma based on performance data. Coordinated multi-platform campaign execution using Trello for project management and Facebook's native scheduling tools to automate post distribution. Successfully improved brand identities and led political campaigns through data-driven creative iteration and strategic audience targeting.

Education

Austin Community College, US — Associate in Computer Science

JANUARY 2024 - DECEMBER 2025

To further advance my qualifications I studied Computer Science. How to apply my skills better through analytical and software tools. From calculus to art appreciation. And deepening my understanding of American culture.

Kyiv University of Culture, Ukraine — Bachelor of Journalism, audio/visual and radio art.

SEPTEMBER 2017 - JULY 2020

Place where I learnt the essentials of media communications. The most valuable skill I got is a solid expertise in the marketing domain and public communications.

Awards

NOI Hackathon victory. December 2023. Won a hackathon by creating an app for logistics business to increase workers engagement.

ACC honours program. January 2025. Joined ACC honours program via extensive support from the faculty and excellent academic standing. Completed honours Statistic and Calculus classes.

Austin AI Alliance. August 2025. Received an award as a participant and was a data-team lead for the event organizers. Was responsible for collecting data from the event and performing sentiment analysis.

Languages

English, Italian, Ukrainian, Russian.

Basic proficiency in Chinese, German and French.
